2. ABSTRACT:

Inventory management system which is helpful for the business operators. Where shopkeeper keeps the records of purchase and sales. Mismanaged inventory means disappointed customers. Too much cash tied up in slower sale and warehouses. This inventory is eliminate paper work, Human faults, manual delay and speed up process this inventory management system will have the ability to track sales and available inventory ,tells a shopkeeper when It's time to re-order and how much to purchase. Inventory management system is windows application developed for windows operating systems which focused in the area of inventory control and generate.

The software is made up of two parts: The frontend is developed using Microsoft visual basic MV2010 and the backend from SQL server Database 2008.

Keywords: Database, Inventory, Public, Software.

1. INTRODUCTION:

E-commerce (electronic commerce) refers to the buying and selling of goods and services through the internet. It involves online transactions and the transfer of money and data between different parties. E-commerce has revolutionized the way people do business, and it has enabled companies to reach a wider audience and increase their sales.

E-commerce can be conducted in several ways, including B2B (business-to-business), B2C (business-to-consumer), C2C (consumer-to-consumer), and C2B (consumer-to-business). B2B e-commerce refers to transactions between two businesses, while B2C e-commerce refers to transactions between businesses and consumers. C2C e-commerce refers to transactions between individual consumers, while C2B e-commerce refers to transactions in which consumers offer products or services to businesses.

E-commerce platforms are websites or applications that facilitate e-commerce transactions. These platforms may offer a range of features, such as online catalogs, shopping carts, payment processing, and order tracking. Some of the most popular e-commerce platforms include Amazon, eBay, and Shopify.

E-commerce has several advantages over traditional brick-and-mortar retail, including lower overhead costs, 24/7 availability, and the ability to reach customers around the world. However, e-commerce also presents some challenges, such as the need for secure payment processing and the risk of fraud. Despite these challenges, e-commerce continues to grow in popularity and is expected to play an increasingly important role in the global economy.

CONCLUSION:

E-commerce still represents one of the business methods that take advantage if done the right way, even if the stock market and commodities fell, but E-Commerce still able to survive and receive high transaction. E-commerce has a tremendous opportunity in the course of or business in Malaysia. In addition, it is also to introducing new techniques and styles in a transaction. Use the extensive E-Commerce in the Internet world is actually much better to bring the goodness of the individual or the state.

E-Commerce has undeniably become an important part of our society. The successful companies of the future will be those that take E-Commerce seriously, dedicating sufficient resources to its development. E-Commerce is not an IT issue but a whole business undertaking. Companies that use it as a reason for completely re-designing their business processes are likely to reap the greatest benefits. Moreover, E-Commerce is a helpful technology that gives the

consumer access to business and companies all over the world.

2.ABSTRACT

Customer satisfaction is the key to success for any business. The wedding management system increases operational efficiency through use of an internal wired communication system. The communication system increases customer satisfaction by leaving a system.

These days societal expectations set wedding standards very high, and it is very common for couples to feel like they must hire a wedding planner to ensure that their special day is the best that it can be. Many articles explain the struggles of planning weddings yourself and the details of all the services that professional wedding planners offer (Han-Chen, H., Cheng-I, H., & Yi-S, H., Blakely, K., Dwyer, L., Herron, D. A., Stafford, L., & Scott, A. M., Pattern.). However, there is not much information specifically covering the history of wedding planners in a professional capacity and telling individuals why, unlike so long ago, wedding planners are so invaluable to the planning process. This paper analyses the history of wedding planning as well as the job of a wedding planner and the difficulties couples may face when planning a wedding to answer the question of how weddings and wedding planning has changed over the years. It also addresses changes in society that have affected the industry over the years. I will conduct interviews and surveys to support and go deeper into how weddings in different time periods are not the same. I hope to be able to share my newly found knowledge of what weddings started out as, how they changed with the years and what wedding planners do, with others who may be planning a wedding in the future or with those who just wish to learn more about the industry.

1.INTRODUCTION

Online Wedding Planning System is a web-based project which act as a bridge between potential users and wedding planners. As people spend lots of money on Weddings, Parties and MICE, but they involve their selves in each and every affair in such a way that at the end of the day they feel that they have not seen the wedding of their only Son/Daughter or they have not been able to enjoy the functions. That is why, a Wedding Planner Co-coordinator is required to make people comfortable on the day of the Wedding /Event. So that I have tried to make a web project so that all the plannings for the food, venues, invitation cards, bookings can be done on time. This project is developed to make the users comfortable to enjoy each and every function along with their family, friends, and relatives. This project organizes

- Venues & Accommodation.
- Sets, Themes, Concepts & Decorations
- Menu Planning, F & B and Bar Tendering Services.
- Music & Entertainment. Wedding Jaimala Themes.
- Photography: Still & Video.
- Rental Services Like: Security, Hostesses, Travel & Transport,
- Royal Procession, Fireworks.
- Wedding and Hospitality Management.

Wedding planning is a growing profession. Traditionally wedding planners were friends or family members who took on the burden of managing the wedding details.

Once upon a time, the bride's parents were in charge of paying for and Co ordinating the wedding. The bride's mother was often the wedding planner. However, modern wedding planning is a direct result of the new couple living miles apart from their immediate family.

When engaged couples live so far away from their families, the benefits of hiring a professional to handle all the details and co-ordinate their wedding can save them time and money, as well as providing them enormous stress relief in the months, weeks and days leading up to the event itself.

As the wedding planner you will be the money manager, economic advisor, facilitator, mediator, organizer, and artist. You will be the director of the fairytale and handle the setting, props, and casting. You will hold hands, coax vendors, organize the decorators, offer advice, negotiate contracts, keep records, and track data. You will provide mental, emotional, and physical support to the bride in a variety of ways. You will be there to guide, to protect, and ultimately, to plan the day that many consider to be one of the most important in their lives.

30. CONCLUSION

The Online Restaurant Management System (ORMS) is for computerizing the working in a restaurant. It is a great improvement over the manual system. The computerization of the system has speed up the process. In the current system, the front office managing is very slow. The restaurant managing system was thoroughly checked and tested with dummy data and thus is found to be very reliable. The software takes care of all the requirements of an average restaurant and is capable to provide easy and effective storage of information related to customers that come up to the restaurant.

1. ABSTRACT

Foodie House is a restaurant which located near God agama expressway interchange in Vijayawada. Currently they are offering their services to large number of customers daily. Their customer base is growing day by day because of their location and quality of their food. Even though this is a small restaurant, the service they are offering is huge. With the growing customer base, it is difficult to offer services to all of them manually. Therefore, this restaurant requires moving to a computerized solution. This will help to run their operations smoothly and in more efficient manner. Suggested system allows Amman restaurant to increase the scope of the business with the little staff they have. As this is a growing business which is in its first stage, they still cannot go for more staff. Current trend is also going for an online solution. This system allows restaurant too quickly and easily manage online menus and customers can navigate and place orders really fast. Restaurant staff also quickly view orders and prepare orders without previous miscommunication. Graphical interfaces are really efficient and effective for both customers and restaurant staff for the managers and owners this system is very effective because they can view their requirements in reporting module. This system has used MVC (Model View Controller) architecture. Object oriented approaches have been used in developing. For analysis and design, Uniform resource modeling was used. PHP, html, JavaScript etc. has used to develop the website. MYSQL has been used to create to databases. Lanka hosting space was used to host the website. Any web browser such as Edge, Chrome, and Firefox can be used to access the website in any environment such as windows or Linux

2. INTRODUCTION

"Online Restaurant Management System" is a Web application. This system is developed to automate day to day activity of a restaurant. Restaurant is a kind of business that serves people all over world with ready-made food. This system is developed to provide service facility to restaurant and also to the customer. This restaurant management system can be used by employees in a restaurant to handle the clients, their orders and can help them easily find free tables or place orders. That services that are provided is food ordering and reservation table management by the customer through the system online, customer information management and waiter information management, menu information management and report. The restaurant menu is organized by categories (appetizers, soups, salads, entrees, sides and drinks) of menu items. Main objective build the system this is to provide ordering and reservation service by online to the customer. Each menu item has a name, price and associated recipe. A recipe for a menu item has a chief, preparation instruction and sand association ingredients. With the system online, ordering and reservation management will become easier and systematic to replace traditional systems where are still using paper. To resister a meal online, the customer has to become a member first then he can access the later part of the site. This project to facilitate customer for make online ordering and reservation. The option of becoming member was only an attempt to avoid (to some extent) placing the fake bookings.

0. CONCLUSION

We understand that this is a difficult moment for businesses of all sizes. Consumers will (carefully) open their doors to your deliveries if you set up an online food ordering system. Restaurants may have had to close their doors, but you can bet that if you set up an online food ordering system, customers will (carefully) open their doors to your deliveries.

There's a way here for you, whether you want to maintain as much profit as possible or prefer convenience over total control. To assist you to choose the right option for you, we've talked you through the three primary methods you can set up your own meal ordering system.

Remember that you are not obligated to use only one methodology of online food ordering system. You can, for example, create your own website while also accepting orders from third-party delivery providers — strike the proper balance for your company and keep your satisfied consumers coming back for more.

2. ABSTRACT:

Inventory management system which is helpful for the business operators. Where shopkeeper keeps the records of purchase and sales. Mismanaged inventory means disappointed customers. Too much cash tied up in slower sale and warehouses. This inventory is eliminate paper work, Human faults, manual delay and speed up process this inventory management system will have the ability to track sales and available inventory ,tells a shopkeeper when It's time to re-order and how much to purchase. Inventory management system is windows application developed for windows operating systems which focused in the area of inventory control and generate.

The software is made up of two parts: The frontend is developed using Microsoft visual basic MV2010 and the backend from SQL server Database 2008.

Keywords: Database, Inventory, Public, Software.

3.GENERAL OVERVIEW:

This project is the basically updating the manual Inventory Management System into an internet based application .So that the users can know the details of Other account or webs in the website etc..,

- Secured database
- User tracking
- Search features
- Calculating prices
- Checking the available of stocks
- Analyze the Products &items
- Sales Bills
- Purchases quantity
- Usage of products / returns
- Reports

4. KEY FEATURES:

- Order management: With the help of a proper and effective inventory system, an adequate amount of inventory can maintain at all times.
- Asset tracking: Tracking of the asset is yet another feature of asset management.
- Service management.
- Inventory optimization.

Abstract:

This guide book describes about the students admissions in foreign universities & their visa processing. It explains about developing an application through which students from different locations can access university information and takes admissions. Using this system time for application process will be reduced and students who are located geographically can fill admission forms .It specifies different occasional dates are notifies in their calendars.

It contains different universities with different courses available for the students. It helps to students for admission login purpose. The purpose of the project identifying the area of study to which it belongs. The research problem that motivates the project. The methods used to address this research problem. Documents or evidence analyzed .It briefly describes about the students requirements, eligibilities and their registrations.

Overseas education consultancy is experts or counselors who assist ,guide and direct students is planning their higher education Best universities .The rise of overseas education can be seen in India and the number of students going Best universities has increased ever since. The education sector has seen a growth of new agents that is the overseas consultancy. Therefore, the aim of this study is to find right college and find right career path after education so overseas education consultancy played an important role for students going Best universities for education. The most important part of this study was to find the prevalence of students going to consultants for overseas education and to study the benefits gained after joining a consultancy. By these findings I have able to put forth the suggestions and recommendations to them an agreement. The study was carried out at pink moon technology office and Ag&Sg Siddhartha College, Vuyyuru. Primary data was collected through questionnaire survey amongst the students who attended the seminars conducted by pink moon Student Registration Platform and the students who enrolled for guidance. 100 students responded to the questionnaire survey. Secondary data was collected through previously studied research articles and company's website. The study results showed that 66.7% students visited consultancy for guidance in overseas education process. While 73.5% of students prefer to study Best universities. 88.5% students have been benefitted by joining an education consultancy for services such as Profiling, Documentation, Counseling and Standardized test are the ones which have benefitted the students most.

Scanned with AnyScanner

1. INTRODUCTION

Overseas education consultancy is experts who assist, guide and direct students is planning their higher education Best universities. The rise of overseas education can be seen in India and the number of students going Best universities has increased ever since. The education sector has seen a growth of new agents i.e. the overseas consultancy. The overseas education consultancy has mad ether presence known in India. According to the GMAC (Graduate Management Admission Council), the number of students from India is second highest to purse overseas education after India. According to an article published by Open, that the total number of Indian students currently pursuing higher education in Best Universities is at about 186,000. In another report says that the number of Chinese students is somewhere around 220,000. There are number of factors that have made overseas education consultancy of a prime importance.

- Higher Degree has been of a high importance in the business world.
- Migration is another major factor.
- Permanent residency in other countries.

Financial and professional growth that a Higher Degree brings is unmatchable. These overseas education consultancies have a wide network and the product/services offered by them are in line with the higher education process. The majority of students select masters in science and MBA as their future goal. But the process to achieve these goals is very tedious. Students are confused in selecting the right education destination and the right course, the other factors that the students worry about is the cost, accommodation is another factor, the visa process and the documentation is the one that takes the longer process because every country have their own visa requirements and every college/institution Best universities has their own sets of documentation procedure. All in all, the entire process, from beginning till the end takes about a year to complete.

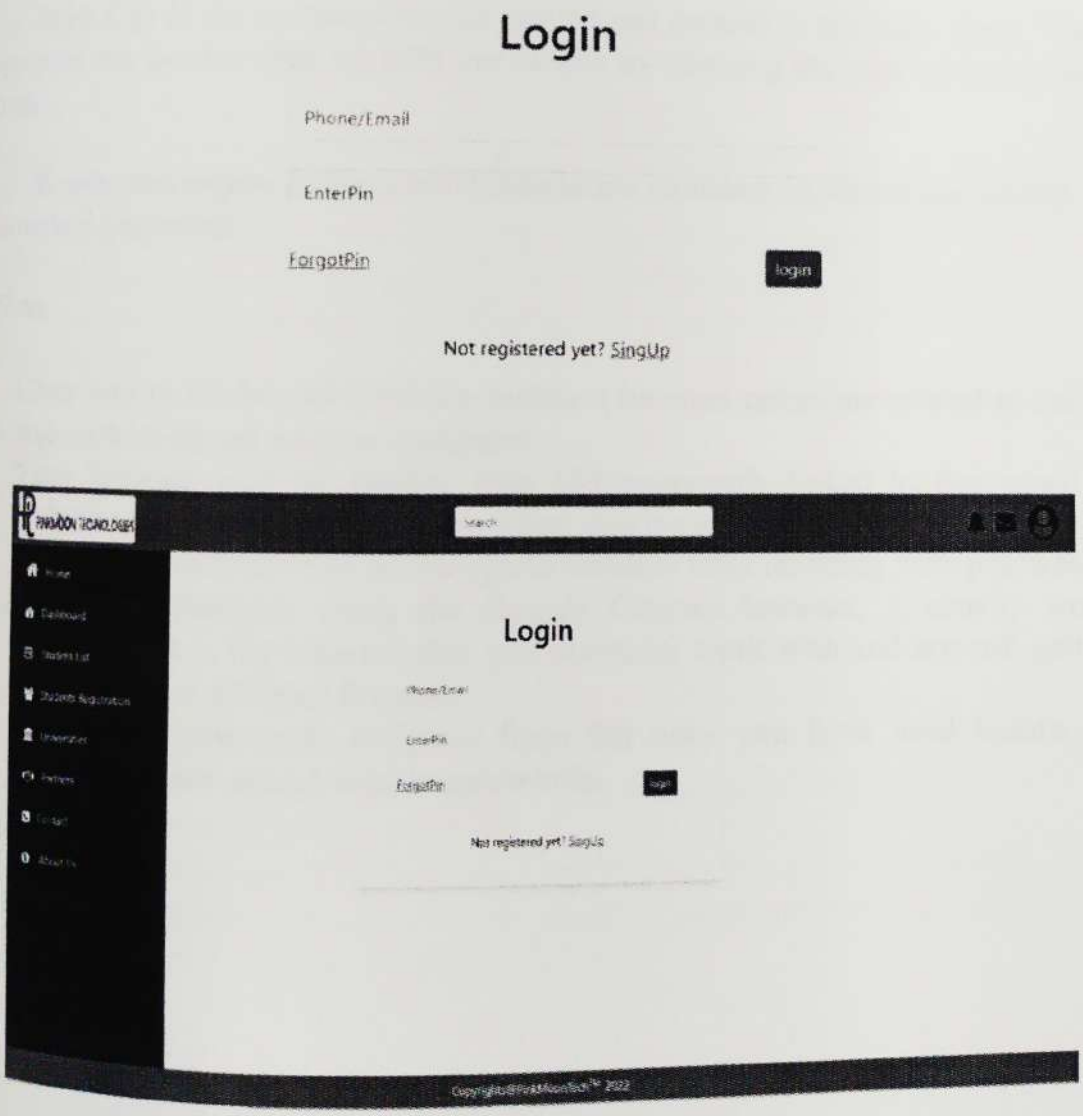
1. HOME PAGE/LOGIN

This form is useful to create administrative block to login into the university site. We need to login with our e-mail to register into the university.

By applying with the e-mail then we need to click the login button which has been placed below in the administrative id. If the password of the mail was incorrect, we need to click forgot password.

If we are already haven't created the account in this administrative block, we need to create. A new account by clicking the signup which was present in the below of the page.



Scanned with AnyScanner

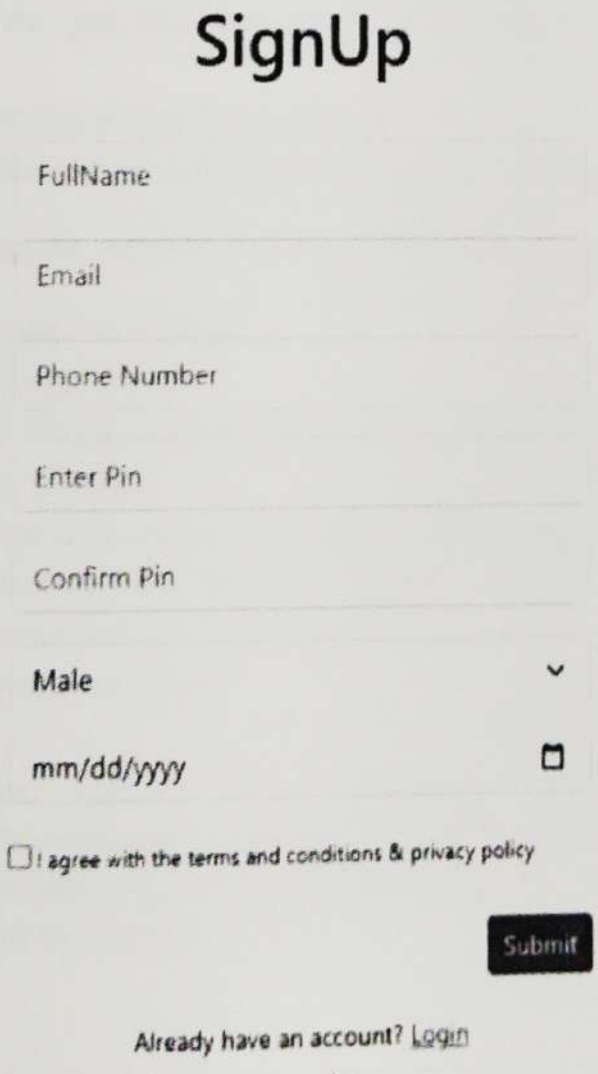
2. SIGNUP

If the account was not existed/not created in the login form, we need to sign up with our details by clicking the sign-up button in the form.

By clicking this signup, few details will be asked by the Google to create a new account in the administration block in the form.

Sign up is a verbal phrase. It means to commit or agree to participate in an endeavor such as a class, the military, or a business deal. It is the act of putting one's name to a contractor list. The past tense of signup is signed up, the indicative is signing up.

The details will be asked by the signup form was Email, ph.no, date of birth, enter Pin, generate pin.



Scanned with AnyScanner

24. CONCLUSION

The GUI offers user friendly experience and allows users with non-technical back ground as well (like student's parents also can access and see their children application process).

The application performed exceptionally well during the testing and performance is also measure standards .Compared to existing hardware solutions, our application is flexible, affordable, faster without need of setting different infrastructure, it can be deployed anywhere in client systems with minimum system configurations .Notification system is also enabled to communicate students and counselors or universities much better way so that they do not miss any information and timelines. Model is built to expand any scale as per need and current application is designed by keeping growth within next 5-7years.

Students can easily raise queries related to exams, results, events, admissions, and many other things. They can easily get information related to their educational organization. With the help of an educational website, you can update course material online, right from your computer screen.

1.ABSTRACT:

A coffee shop has always been more than a place to have a beverage. It is a place to socialize, ideate, have fun and meet new people. As Starbucks puts it, it's the third place, a home away from home or office. Also, due to the competitive and busy lifestyles that people lead today, a coffee house near their work or home has become a major point of relaxation Coffee-Shop-Management-system is general software developed particularly for the Coffeeshop transaction. This is a desktop application. This software collects the details of Products, Costs, admin & Workers Information and their transaction. This software becomes useful for all the users in the Coffee Shops so that their transaction and details become up to date, since it is developed only for coffee shop so it is developed by using LAN concepts where multi-users can access single server at a same time using LAN and improve their

2.INTRODUCTION :

Online Restaurant Management system is a web application. This system is developed to automate day to day activity of a restaurant. Restaurant is a business that serves people all over world with ready-made food. This system is developed to provide service facility to restaurant and also to the customer. This restaurant management system can be used by employees in a restaurant to oversee the clients, their orders and can help them easily find free tables or place orders. The services that are provided is food ordering and reservation table management by the customer through the system online, customer information management and waiter information management, menu information management and report. The restaurant menu is organized by categories (appetizers, soups, salads, entrees, sides, and drinks) of menu items.

Main objectives build the system this is to provide ordering and reservation service by online to the customer. Each menu item has a name, price and associated recipe. A recipe for a menu item has a chef, preparation instruction sand associated ingredients. With this system online, ordering and reservation management will become easier and systematic to replace traditional system where are still using paper. To resister a meal online, the customer has to become a member first then he can access the later part of the site. This project to facilitate customer for make online ordering and reservation. The option of becoming member was only an attempt to avoid (to some extent) placing the fake bookings.

It is the system for managing the restaurant business. After successful login the customer can access the menu page with the items listed according to the desired time.

The main point of developing this system is to help restaurant administrator manage the restaurant business and help customer for online ordering and reserve table. In proposed system user can search for a menu according to his choice.

The principal objective of your website should always be to attract customers to your restaurant and as such an online booking function is the most essential feature. This may lead to another page with your restaurant's opening times and telephone number for those wanting to make reservations by phone.

28. CONCLUSION

The Online Restaurant Management System (ORMS) is for computerizing the working in a restaurant. It is a great improvement over the manual system. The computerization of the system has speed up the process. In the current system, the front office managinig is very slow. The restaurant managing system was thoroughly checked and tested with dummy data and thus is found to be very reliable. The software takes care of all the requirements of an average restaurant and is capable to provide easy and effective storage of information related to customers that come up to the restaurant.

2. ABSTRACT:

Inventory management system which is helpful for the business operators. Where shopkeeper keeps the records of purchase and sales. Mismanaged inventory means disappointed customers. Too much cash tied up in slower sale and warehouses. This inventory is eliminate paper work, Human faults, manual delay and speed up process this inventory management system will have the ability to track sales and available inventory ,tells a shopkeeper when It's time to re-order and how much to purchase. Inventory management system is windows application developed for windows operating systems which focused in the area of inventory control and generate.

The software is made up of two parts: The frontend is developed using Microsoft visual basic MV2010 and the backend from SQL server Database 2008.

Keywords: Database, Inventory, Public, Software.

3.GENERAL OVERVIEW:

This project is the basically updating the manual Inventory Management System into an internet based application .So that the users can know the details of Other account or webs in the website etc..,

- Secured database
- User tracking
- Search features
- Calculating prices
- Checking the available of stocks
- Analyze the Products &items
- Sales Bills
- Purchases quantity
- Usage of products / returns
- Reports

4. KEY FEATURES:

- Order management: With the help of a proper and effective inventory system, an adequate amount of inventory can maintain at all times.
- Asset tracking: Tracking of the asset is yet another feature of asset management.
- Service management.
- Inventory optimization.

Scanned with AnyScanner

1. INTRODUCTION:

Inventory is one of the most crucial aspects of any business model. A close tab on the movement of inventory can make or break your business and that's why entrepreneurs always emphasis on effective inventory management. While a few business owners do understand the significance and crucial of tracking inventory on a regular basis, some fail to realize its importance making their business fall through the unseen cracks.

Because among all the current assets of business, inventory is the least liquid, any wrong in the management of inventory cannot be corrected easily and it can be very costly for the firm. Funds of the firm which are procured from internal as well as external sources need to be managed inventory and for this purpose inventory should be aware of all the factors affecting the level of management and the methods to control it.

The term 'Inventory' refers to the stock of raw materials, spare parts and finished products held by a business firm. It is the aggregate quality of materials, resources and goods that are idle at a given point of time.

Inventory management refers to the process of managing the stocks of finished products, semi-finished products and raw materials by a firm. Inventory management, if done properly, can bring down cost and increase the revenue of a firm.

The inventory management process begins as soon as the firm has started production and ordered raw materials, semi-finished products or any other thing from a supplier. Once orders have been placed, there is generally a short period of time available to the firm to put an inventory management plan in place before the supplies are delivered.

Username:

Username and Password.Summary Difference between Username and Password is that password is a private combination of characters associated with the user name that allows access to certain computer resources.

Enter pin:

A personal identification number (PIN) is a numerical code used in many electronic financial transactions. Personal identification numbers are usually issued in association with payment cards and may be required to complete a transaction. The purpose of a personal identification number (PIN) is to add additional security to the electronic transaction process.

Enter conform pin:

Scanned with AnyScanner

2. FORGOT PASSWORD:

If the password was incorrect in the login form, we have to create a new password by clicking the forgot password in the right side of the login form. After clicking the forgot password, it may ask our mobile number after entering the phone number OTP has been sent to the phone. After that we need to create a new password with at least 8 characters within the characters one character should be special character.

After typing the new password, it will ask again the confirm pin with the same pin. After generating a new pin, we need to click the SUBMIT Button.

- Email: Enter the email of the person
- Reset password: It is the button to reset the password

DATABASES CONNECT TO FORGET PASSWORD:

1. Forgot password is main page to website
2. When user forgot the password using this page.
3. When user gives are new password.
4. Directly stores database and directly to return the Forgot password page.
5. Directly connect to database and request the data.
6. Data retrieved and "wrapped up" into XHTML.
7. Finally Forgot password page sent to client.

If the user successfully logged in to the system, then he/she will see landing page which is dashboard with high level details.

Scanned with AnyScanner

14.CONCLUSION:

In conclusion, an inventory management system (IMS) is a critical tool for businesses that want to improve their inventory management processes and increase efficiency. It can help businesses track inventory levels, manage purchase and sales orders, and automate the reordering process.

Inventory management is important for keeping costs down, while meeting regulations. Supply and demand is a delicate balance, and inventory management hopes to ensure that the balance is undisturbed.

Thus inventory system was implemented successfully.

1.ABSTRACT

Customer satisfaction is the key to success for any business. The Restaurants management system increases operational efficiency through use of an internal wired communication system. The communication system increases customer satisfaction by leaving a system at each table which the customer can use to request for a server. This system allows managers and owners to easily monitor restaurant functions and employee progress.

The online system is implemented to reduce the manual work and enhances the accuracy of work in a restaurant. This system manages and maintains the record of customers and their order online. This Android App has been made in a user friendly interface. So that Customer can add and delete the food items easily. The menu card of different restaurant consists of various food varieties available in the restaurant. Through the place ordering menu, the customer can simply click and order the food. The messaging module tells the supplier to supply the particular food. Also tracking module track the order. The billing system prepares the bill according to the delivered food. This system entirely reduces the unnecessary time. Every order is associated with an individual seat at the table, and orders are built one customer at a time, just like on paper, but with greater accuracy. Hems can also easily be shared by the whole table, moved or modified, and noted and the cost can be calculated in real time.

2.INTRODUCTION

Online Restaurant Management system is a web application. This system is developed to automate day to day activity of a restaurant. Restaurant is a kind of business that serves people all over world with ready-made food. This system is developed to provide service facility to restaurant and also to the customer. This restaurant management system can be used by employees in a restaurant to handle the clients, their orders and can help them easily find free tables or place orders. The services that are provided is food ordering and reservation table management by the customer through the system online, customer information management and waiter information management, menu information management and report. The restaurant menu is organized by categories (Veg,Non-Veg, soups, salads and shakes) of menu items.

Main objectives build the system this is to provide ordering and reservation service by online to the customer. Each menu item has a name, price and associated recipe. A recipe for a menu item has a chef, preparation instruction sand associated ingredients. With this system online, ordering and reservation management will become easier and systematic to replace traditional system where are still using paper. To resister a meal online, the customer has to become a member first then he can access the later part of the site.

This project to facilitate customer for make online ordering and reservation. The option of becoming member was only an attempt to avoid (to some extent) placing the fake bookings.

It is the system for managing the restaurant business. After successful login the customer can access the menu page with the items listed according to the desired time.

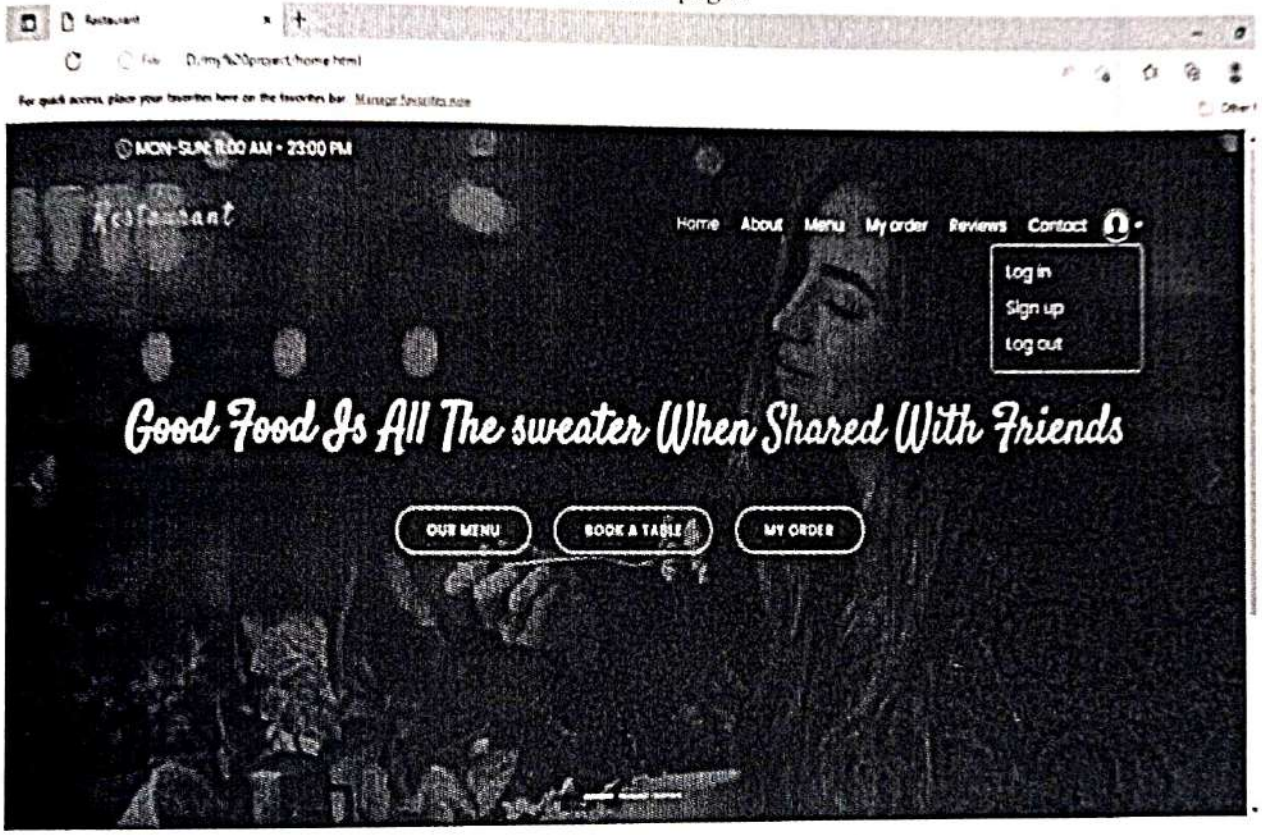
The main point of developing this system is to help restaurant administrator manage the restaurant business and help customer for online ordering and reserve table. In proposed system user can search for a menu according to his choice.

The principal objective of your website should always be to attract customers to your restaurant and as such an online booking function is the most essential feature. This may lead to another page with your restaurant's opening times and telephone number for those wanting to make reservations by phone.

maintainable, and expandable.

1.HOME PAGE

A homepage is a page designated to be the main entry point to a website, appearing when a user starts a session. Home pages usually offer a welcome to the Internet user, a text explaining the meaning of the website and a menu with links to other pages.

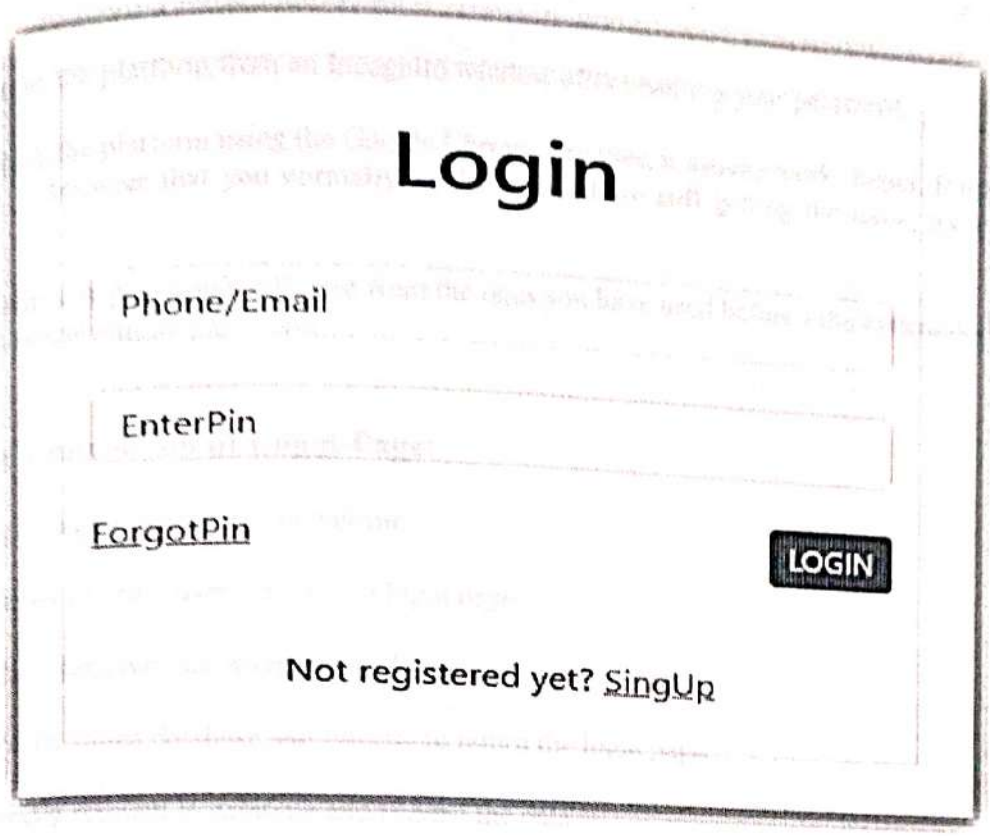


2.LOGIN PAGE

This form is useful to create administrative block to login into the restaurant site. We need to login with our mail and our password to get into the restaurant web application.

By applying with the mail and password then we need to click the login button which has been placed below in the administrative id. If the password was incorrect or if user forget his/her password,
we need to click forgot password.

If we are already haven't created the account in this administrative block, we need to create. A new account by clicking the signup which was present in the below of the page.



Username: If you are login to the account then you can enter this via phone number or email Password: Enter the password

Login button: Login button is to submit the information, that they entered the username and password.

Message button: message box/chart box helps to know about the student's messages. If the student has any quarries, then they can send the message.

Don't have an account? Signup: when you don't have an account, if you're a new user then you have click on the signup to get an account.

Error messages - show the Invalid Username and Password Error: when you're entered the wrong password then,

- Clear your Cache and Cookies - common browser issues are related to cache and cookies stored on your computer.

24.CONCLUSION

The Online Restaurant Management System (ORMS) is for computerizing the working in a restaurant. It is a great improvement over the manual system. The computerization of the system has speed up the process. In the current system, the front office managing is very slow. The restaurant managing system was thoroughly checked and tested with dummy data and thus is found to be very reliable. The software takes care of all the requirements of an average restaurant and is capable to provide easy and effective storage of information related to customers that come up to the restaurant.

1.ABSTRACT

Marriage information has always been an integral part of the knowledge base in any civilized society. Usually some agencies and other de-institutionalized sources become operative in producing and transferring great variety of matrimonial information. In recent time, online matrimony portals accelerate the opportunities of providing newer matrimony services for sharing matrimonial information more comfortably and selectively, though often criticized in terms of adequacy and authenticity of such information. This paper aims to present a brief account on marriage information systems and services with reference to India, thus provide glimpses of popular matrimony sites emerged in last two decades. It evaluates the usefulness and web-metrics as well as popularity of broad-spectrum matrimony portals; those have become accessible to diverse Indian communities, and beyond the geographical boundaries. It emphasizes on proper coordination and standardization among the service portals toward developing a comprehensive information system for potential marriage-information seekers in national, regional, and local level.

Scanned with AnyScanner

Online Marriage Bureau

It is referred to as a business in which candidates interested in marriage register their names with the Marriage Bureau or the available matrimonial sites, which then suggests compatible matches from its database. It may be according to the requirements of the candidates (related to caste, community region, qualification, etc. In today's era, both online and offline marriage bureaus are present. An individual or a group can manage the Marriage Bureau from their home or place of business.

The bulk of unions was created in the workplace. When a candidate or a candidate's family visits the Bureau or when they send mail, emails, or phone calls, the Bureau will give instant matching. There are numerous websites where the details of the candidates are displayed, making it easy for the opposing candidates to choose the ideal individual for themselves. Some marriage services arrange encounters between prospective candidates and even allow their families to communicate.

Steps for Launching a Marriage Bureau Business in India

1. Choose between regional and national levels.
2. Decide whether to go with a partner or by yourself.
3. Learn more about licence and registrations.
4. Seek advice from a married website developer.
5. Determine the intended market.
6. Promote and enrol in the online marriage service.

5.ABOUT PAGE

•An About page is a special web page on a site where your readers/visitors learn more about you and what you do. This is not a contact us page. Writing this page isn't the easiest thing to master, but it's possible once you understand the essential elements that must be included.

•About Us pages are where you showcase your history, what is unique about your work, your restaurant's values, and who you serve. The design, written content, and visual or video elementstogether tell an important story about who you are and why you do it.

Scanned with AnyScanner

24.CONCLUSION

Many people have met because of marriage-related websites. Marriage is a sacred relationship connecting all of us as people from all civilisations worldwide. It is a union of the married couple and the whole family of both candidates. Therefore, conforming to certain information is a valid right of the families. In today's era, finding your ideal companion is easier than you believe. So, give marital websites a shot if you're looking for a committed relationship. This helps keep your family out of trouble because different members may take this into account. While dating, both physically and culturally. Contact Vakilsearch for further details and queries regarding How to start a wedding bureau business in India.

1. INTRODUCTION:

A type of real property with tangible assets. This includes land, buildings on the land, and improvements to the land, such as a roadway or private well. Additionally, real estate encompasses the right of the owner to enjoy the land and its improvements. The features of the land, such as bodies of water, timber, or minerals are part of real estate. The owner of the land can sometimes choose to retain the rights to these features even if the land is sold to someone else.

You might want to invest in real estate because of its potential for an excellent return. It's a much less volatile investment than the stock market. And it has real value. Real estate always has value, unlike stocks which can sink to pennies on the dollar.

Alternatively, you might want to become a real estate agent because of the benefits of that career. Real estate agents report being happy with their jobs and enjoy being able to help people. The potential income for real estate agents is also high.

Of course, owning real estate is also a dream of many people. Having your own property is part of the American dream and the dream of people in nations around the world. Few investments can match the ability of real estate to increase in value over time. If you're looking for ways to use the economy to help improve your wealth, owning real estate is extremely attractive.

Real Estate is one of the oldest and most popular modes of investment. The term real estate is said to have originated in the 1660s and derived from Latin. Real means 'genuine', and estate means 'land'.

Experienced real estate professionals know that hosting an open house rarely leads to a direct sale, and if you're using open houses just for that, chances are you're missing out on a lot.

Here are just a few actions that highly-productive agents perform during open house hosting :

- Uncover potential listings in the area
- Finding potential buyers for other houses
- Getting new referrals
- Speed up the closure process by hosting a house that was already bid for
- Door-to-door prospecting

2. ABSTRACT:

As the name suggests, real estate is the business that are done by the people dealing with properties. Real estate is one of the trending fields in today's world. Property is one of the essential factors that each and everyone want to own. The property may refer to the building that might have the office or the houses. It can be also given for rent or lease or kept for sale. People in today's world will not be patient enough to go searching for properties. They prefer modern way of getting a good property. It can be achieved through the use of web enabled estate agent application. This application can help in searching for the right property with great ease.

The software is made up of two parts: The frontend is developed using Microsoft Visual basic MV2010 and the backend from SQL server Database 2008.

Keywords: Database, Real Estate, Public, Software.

3.GENERAL OVERVIEW:

It's true that anyone can shop for a house, and even get a peek inside, without formally signing on with a real estate agent. But unless you have time to make home shopping a part-time job, an agent might be able to match you with the perfect property much faster.

- Avoiding Closing Problems
- Thorough Record Keeping
- Analyze the Products &items
- Finding Available Homes
- Pricing Expertise
- Requesting Repairs

4. KEY FEATURES:

A real estate feature sheet is a list of features and updates for your seller's home. The Multiple Listing Services (MLS) has a lot of great information already built in but having a feature sheet can help your sellers showcase their home in a more personal way.

- Real estate agents are in a service profession. Their job centers on helping other people, whether they're explaining the home-buying process, staging a home for a showing, or introducing a new family to the community.
- One of the most important qualities of a real estate agent is having enthusiasm for the process, it will feed your clients' excitement—and their trust in you. Therefore enthusiasm is one of the most important characteristics of real estate agents.
- A winning personality.
- Understand the local housing market.
- Engaging personality. .
- Interest in houses and architecture.

Amenities

- Balcony
- Deck
- Parking
- Outdoor Kitchen
- Tennis Courts
- Sun Room
- Cable tv
- Internet
- Concrete Flooring

14.CONCLUSION:

Buying or offering a residence is challenging, however throw a lazy or inept real estate broker right into the formula as well as it can mean disaster. In this article we'll discuss the ways that possible customers and also vendors ought to go about searching for an agent and just what they need to seek prior to executing a listing contract.

The most successful brokers have the tendency to be well-spoken, intelligent and nice in look. Smart, wise business people have the tendency to connect their sales pitch as well as knowledge a lot more successfully. They likewise appear to be a lot more arranged as well as efficient. For these factors purchasers and vendors normally intend to collaborate with them.

Implemented the Real estate Agency Project successfully.

Abstract:

This guide book describes about the students admissions in foreign universities & their visa processing. It explains about developing an application through which students from different locations can access university information and takes admissions. Using this system time for application process will be reduced and students who are located geographically can fill admission forms .It specifies different occasional dates are notifies in their calendars.

It contains different universities with different courses available for the students. It helps to students for admission login purpose. The purpose of the project identifying the area of study to which it belongs.The research problem that motivates the project. The methods used to address this research problem. Documents or evidence analyzed .It briefly describes about the students requirements, eligibilities and their registrations.

Overseas education consultancy is experts or counselors who assist ,guide and direct students is planning their higher education Best universities .The rise of overseas education can be seen in India and the number of students going Best universities has increased ever since. The education sector has seen a growth of new agents that is the overseas consultancy. Therefore, the aim of this study is to find right college and find right career path after education so overseas education consultancy played an important role for students going Best universities for education. The most important part of this study was to find the prevalence of students going to consultants for overseas education and to study the benefits gained after joining a consultancy. By these findings I have able to put forth the suggestions and recommendations to them an agreement. The study was carried out at pink moon technology office and Ag & Sg Siddhartha College, Vuyyuru. Primary data was collected through questionnaire survey amongst the students who attended the seminars conducted by pink moon Student Registration Platform and the students who enrolled for guidance. 100 students responded to the questionnaire survey. Secondary data was collected through previously studied research articles and company's website. The study results showed that 66.7% students visited consultancy for guidance in overseas education process.While 73.5% of students prefer to study Best universities. 88.5% students have been benefitted by joining an education consultancy for services such as Profiling, Documentation, Counseling and Standardized test are the ones which have benefitted the students most.

1. INTRODUCTION

Overseas education consultancy is experts who assist, guide and direct students is planning their higher education Best universities. The rise of overseas education can be seen in India and the number of students going Best universities has increased ever since. The education sector has seen a growth of new agents i.e. the overseas consultancy. The overseas education consultancy has mad ether presence known in India. According to the GMAC (Graduate Management Admission Council), the number of students from India is second highest to purse overseas education after India. According to an article published by Open, that the total number of Indian students currently pursuing higher education in Best Universities is at about 186.000. In another report says that the number of Chinese students is somewhere around 220,000. There are number of factors that have made overseas education consultancy of a prime importance.

- Higher Degree has been of a high importance in the business world.
- Migration is another major factor.
- Permanent residency in other countries.

Financial and professional growth that a Higher Degree brings is unmatchable. These overseas education consultancies have a wide network and the product/services offered by them are in line with the higher education process. The majority of students select masters in science and MBA as their future goal. But the process to achieve these goals is very tedious. Students are confused in selecting the right education destination and the right course, the other factors that the students worry about is the cost, accommodation is another factor, the visa process and the documentation is the one that takes the longer process because every country have their own visa requirements and every college/institution Best universities has their own sets of documentation procedure. All in all, the entire process, from beginning till the end takes about a year to complete.

24. CONCLUSION

The GUI offers user friendly experience and allows users with non-technical back ground as well (like student's parents also can access and see their children application process).

The application performed exceptionally well during the testing and performance is also measure standards .Compared to existing hardware solutions, our application is flexible, affordable, faster without need of setting different infrastructure, it can be deployed anywhere in client systems with minimum system configurations .Notification system is also enabled to communicate students and counselors or universities much better way so that they do not miss any information and timelines. Model is built to expand any scale as per need and current application is designed by keeping growth within next 5-7years.

Students can easily raise queries related to exams, results, events, admissions, and many other things. They can easily get information related to their educational organization. With the help of an educational website, you can update course material online, right from your computer screen.

1.ABSTRACT:

A coffee shop has always been more than a place to have a beverage. It is a place to socialize, ideate, have fun and meet new people. As Starbucks puts it, it's the third place, a home away from home or office. Also, due to the competitive and busy lifestyles that people lead today, a coffee house near their work or home has become a major point of relaxation Coffee-Shop-Management-system is general software developed particularly for the Coffeeshop transaction. This is a desktop application. This software collects the details of Products, Costs, admin & Workers Information and their transaction. This software becomes useful for all the users in the Coffee Shops so that their transaction and details become up to date, since it is developed only for coffee shop so it is developed by using LAN concepts where multi-users can access single server at a same time using LAN and improve their

2.INTRODUCTION :

Online Restaurant Management system is a web application. This system is developed to automate day to day activity of a restaurant. Restaurant is a business that serves people all over world with ready-made food. This system is developed to provide service facility to restaurant and also to the customer. This restaurant management system can be used by employees in a restaurant to oversee the clients, their orders and can help them easily find free tables or place orders. The services that are provided is food ordering and reservation table management by the customer through the system online, customer information management and waiter information management, menu information management and report. The restaurant menu is organized by categories (appetizers, soups, salads, entrees, sides, and drinks) of menu items.

Main objectives build the system this is to provide ordering and reservation service by online to the customer. Each menu item has a name, price and associated recipe. A recipe for a menu item has a chef, preparation instruction sand associated ingredients. With this system online, ordering and reservation management will become easier and systematic to replace traditional system where are still using paper. To resister a meal online, the customer has to become a member first then he can access the later part of the site. This project to facilitate customer for make online ordering and reservation. The option of becoming member was only an attempt to avoid (to some extent) placing the fake bookings.

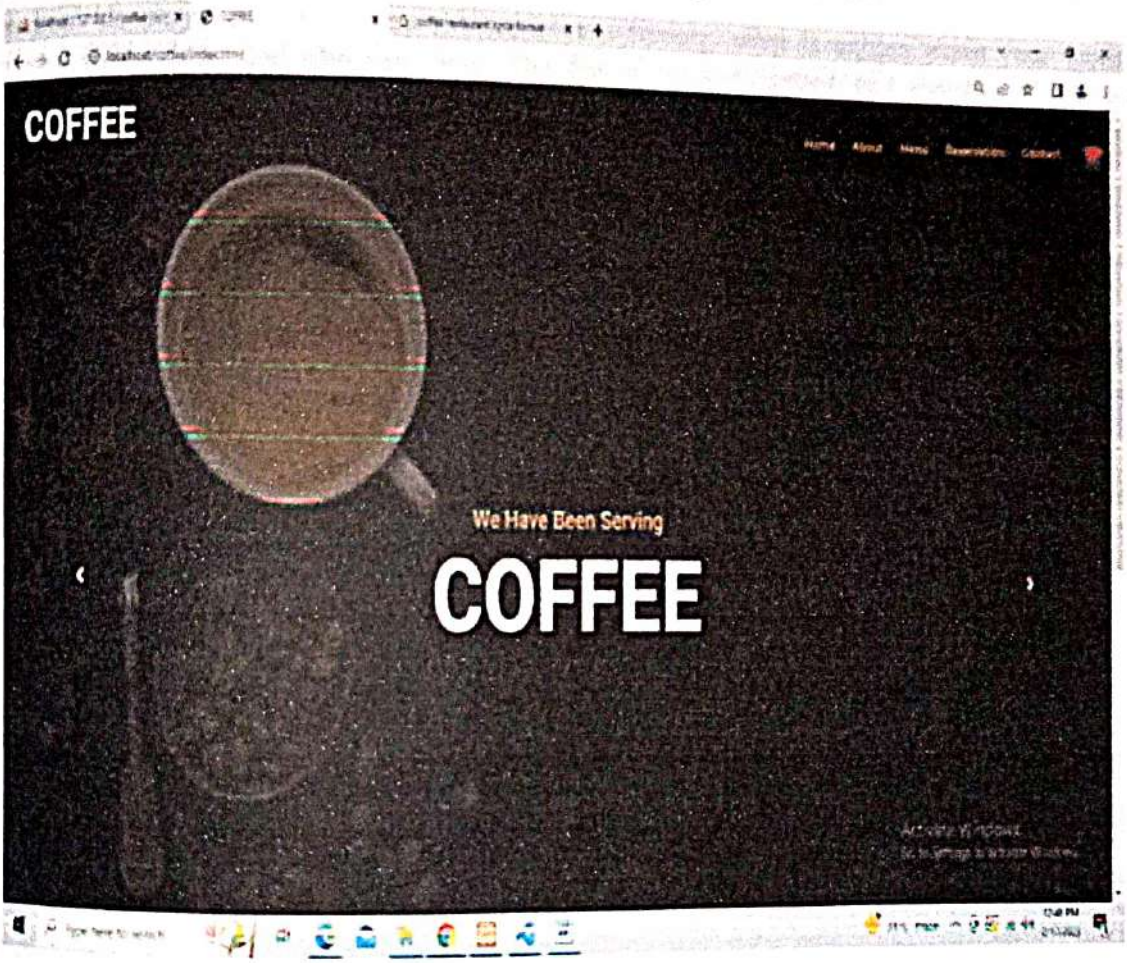
It is the system for managing the restaurant business. After successful login the customer can access the menu page with the items listed according to the desired time.

The main point of developing this system is to help restaurant administrator manage the restaurant business and help customer for online ordering and reserve table. In proposed system user can search for a menu according to his choice.

The principal objective of your website should always be to attract customers to your restaurant and as such an online booking function is the most essential feature. This may lead to another page with your restaurant's opening times and telephone number for those wanting to make reservations by phone.

18.HOME PAGE

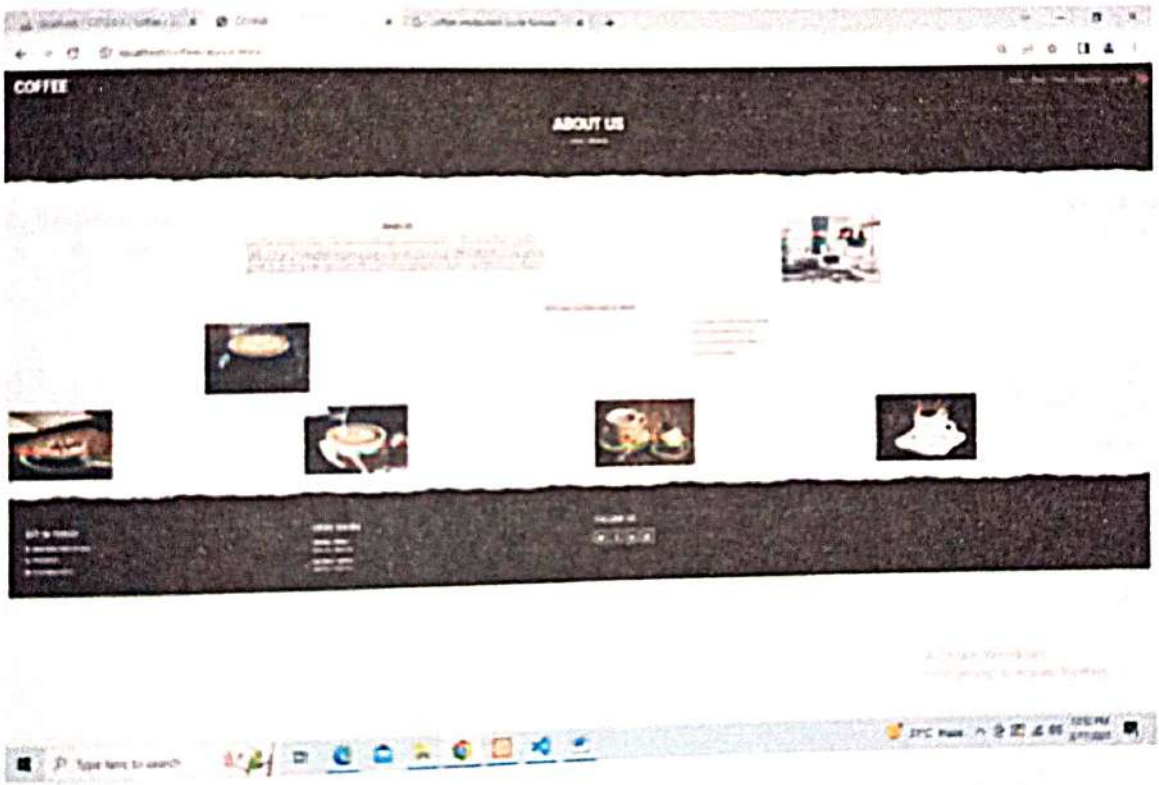
A homepage is a page designated to be the main entry point to a website, appearing when a user starts a session. Home pages usually offer a welcome to the Internet user, a text explaining the meaning of the website and a menu with links to other pages.



19.ABOUT PAGE

•An About page is a special web page on a site where your readers/visitors learn more about you and what you do. This is not a contact us page. Writing this page isn't the easiest thing to master, but it's possible once you understand the essential elements that must be included.

•About Us pages are where you showcase your history, what is unique about your work, your restaurant's values, and who you serve. The design, written content, and visual or video elements together tell an important story about who you are and why you do it.



About Us pages are where you showcase your history, what is unique about your work, your restaurant's values, and who you serve. The design, written content, and visual or video elements together tell an important story about who you are and why you do it.

20. CONTACT PAGE

A contact page is a common web page on a website for visitors to contact the organization or individual providing the website. The page contains one or more of the following items: an e-mail address. a telephone numbers. a postal address, opening hours of the restaurant ,sometimes accompanied with a map showing the location.

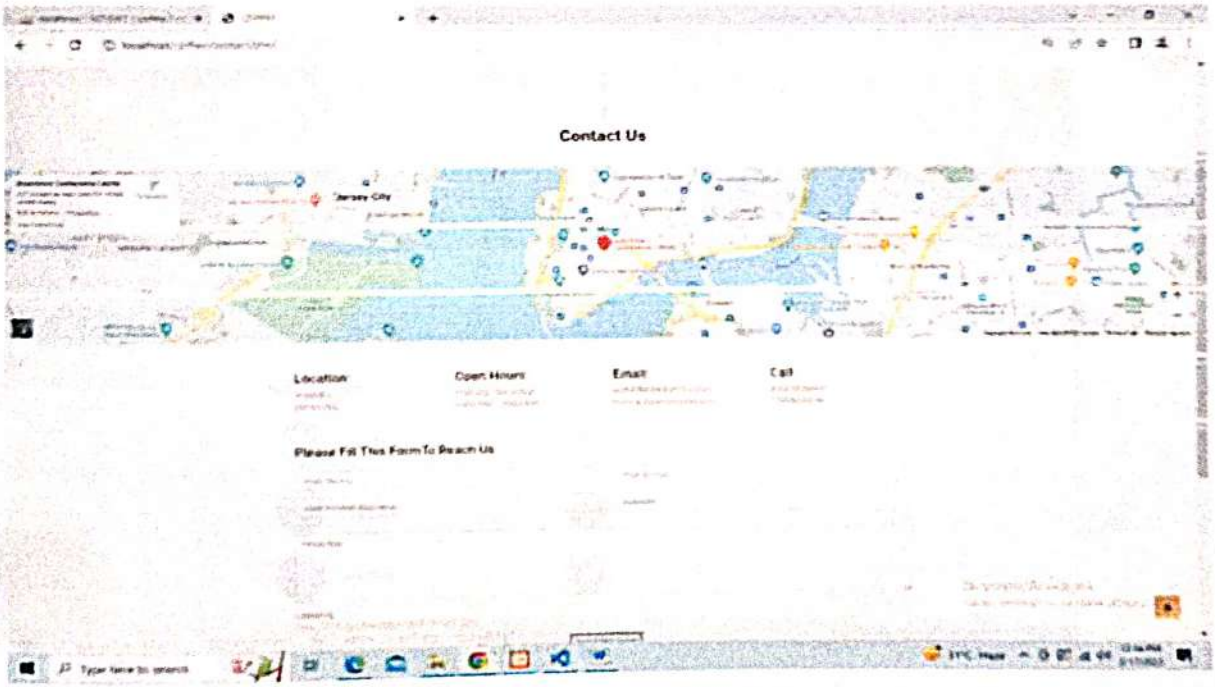
Ideally, a contact page should include both an email address and a contact form for visitors to fill out. You may also choose to include a business address, phone number, or specific employee/department contact information.

Location: Address of the restaurant

Opening hours: This is the section that informs you about the timings of the restaurant

Phone number: Restaurant contact number. If the customer has any quarries, then they can contact through the phone number of the website

Email: If the customer has any quarries, then they can contact through the Email of the website.



28. CONCLUSION

The Online Restaurant Management System (ORMS) is for computerizing the working in a restaurant. It is a great improvement over the manual system. The computerization of the system has speed up the process. In the current system, the front office managinig is very slow. The restaurant managing system was thoroughly checked and tested with dummy data and thus is found to be very reliable. The software takes care of all the requirements of an average restaurant and is capable to provide easy and effective storage of information related to customers that come up to the restaurant.

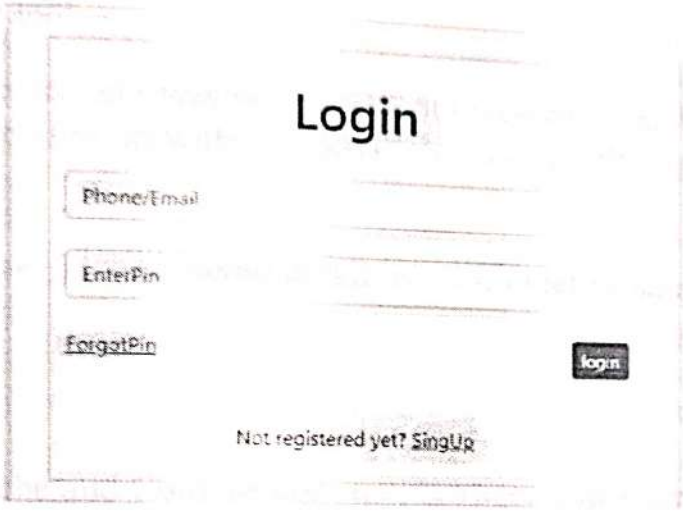
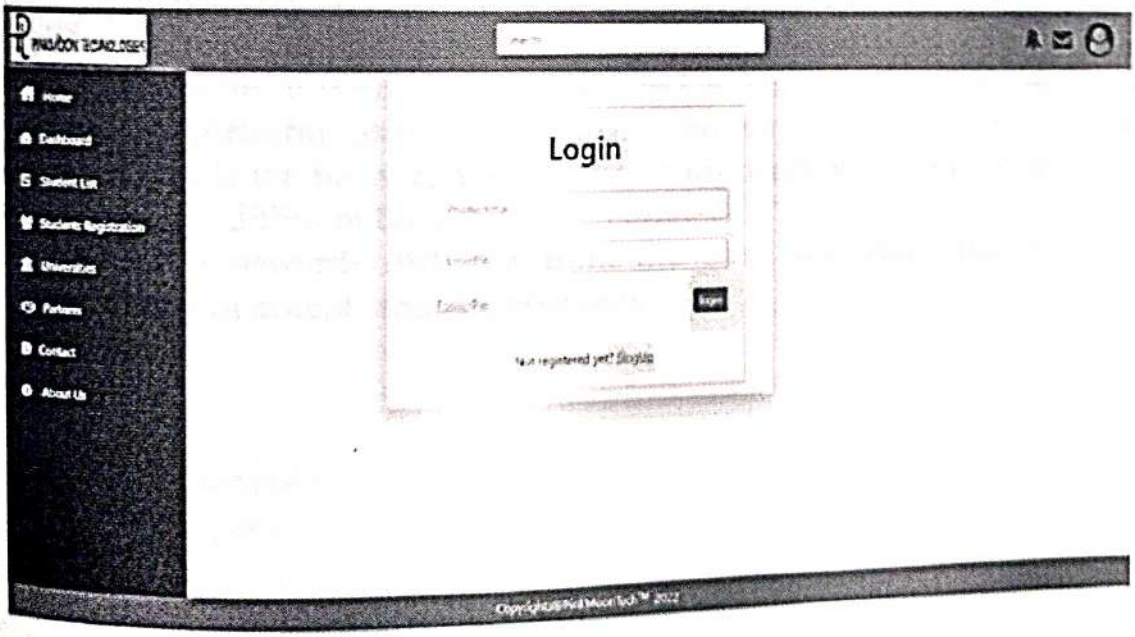
1. HOME PAGE/LOGIN

This form is useful to create administrative block to login into the university site. We need to login with our e-mail to register into the university.

By applying with the e-mail then we need to click the login button which has been placed below in the administrative id. If the password of the mail was incorrect, we need to click forgot password.

If we are already haven't created the account in this administrative block, we need to create. A new account by clicking the signup which was present in the below of the page.





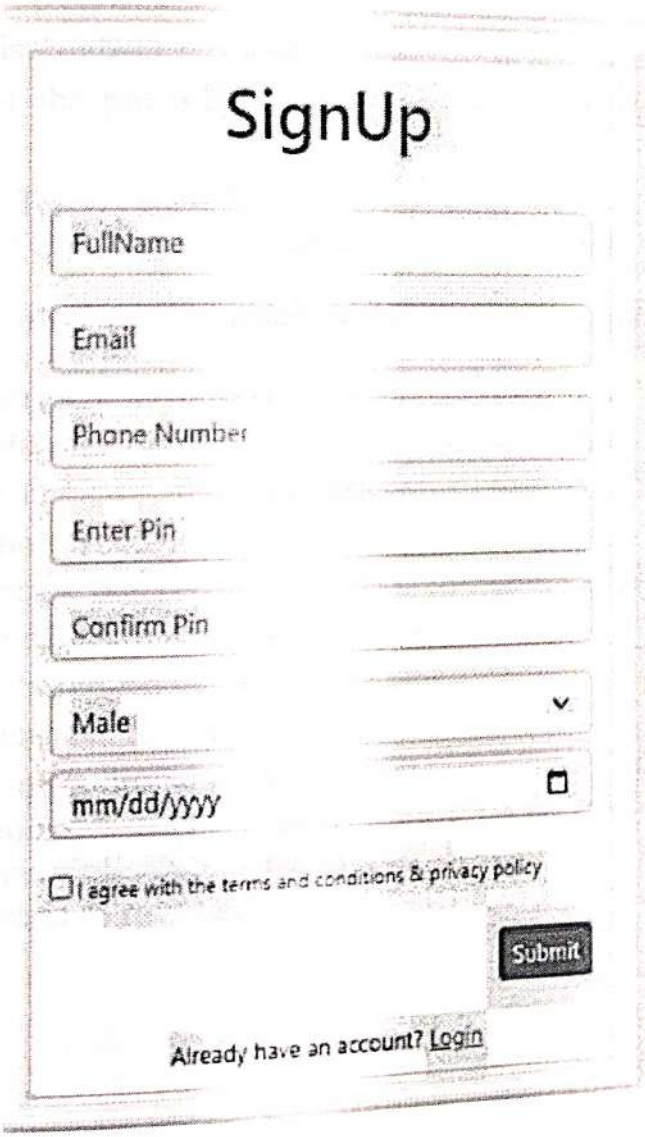
2. SIGNUP

If the account was not existed/not created in the login form, we need to sign up with our details by clicking the sign-up button in the form.

By clicking this signup, few details will be asked by the Google to create a new account in the administration block in the form.

Sign up is a verbal phrase. It means to commit or agree to participate in an endeavor such as a class, the military, or a business deal. It is the act of putting one's name to a contractor list. The past tense of signup is signed up, the indicative is signing up.

The details will be asked by the signup form was Email, ph.no, date of birth, enter Pin, generate pin.



24. CONCLUSION

The GUI offers user friendly experience and allows users with non-technical back ground as well (like student's parents also can access and see their children application process).

The application performed exceptionally well during the testing and performance is also measure standards .Compared to existing hardware solutions, our application is flexible, affordable, faster without need of setting different infrastructure, it can be deployed anywhere in client systems with minimum system configurations .Notification system is also enabled to communicate students and counselors or universities much better way so that they do not miss any information and timelines. 1. INTRODUCTION:

WE CARE MEDICAL SYSTEM

WECARE application is beneficial to the hospital authorities and the patients. In some emergency situations the doctors have to check for the previous medical records of the patient to provide better and accurate treatment for the patient. The main aim of WECARE application is to provide the history of medical report of the particular user (patient) at any time without any service charge. Each and every users of WECARE have a unique identification number (eg : Aadhaar number in India). By using this unique number the patient and doctors can be sign up to the application. The patients and doctors have different login pages. At the time of first login of patient with their aadhaar number a QR code will generate. In the doctors profile there will a QR code scanner which will used to scan the patients QR code, so the doctors can easily access the patient details. Doctors are only capable to upload the new medical details to the patients profile, they can't modify or edit the previous medical reports that are once uploaded.

The patient's and doctor's details are stored in database. It also supports patient-doctor communication (chat room) and doctor -doctor communications [3]. When a doctor scans the QR code of patient the doctors are capable to access the medical reports of that particular patient and doctor can send the QR code to the another specialist for further reference. The uploaded prescribed list of medicines to the patient medical information will help to remind the patients to take medicines and also alerts the next checkup date to The term 'Inventory' refers to the stock of raw materials, spare parts and finished products held by a business firm. It is the aggregate quality of materials, resources and goods that are idle at a given point of time.

the patient and doctor. Patients also get the details of doctor's attendance, so they can easily identify the leave of doctors which will reduce the patient's effort.

2. ABSTRACT:

We Care Medical System is a healthcare organization that aims to provide high-quality medical care to individuals and communities. The system is designed to offer a range of services, including preventative care, diagnosis, treatment of illnesses and injuries, and management of chronic conditions. The organization is staffed by a team of qualified healthcare professionals, including physicians, nurses, pharmacists, and therapists, who work together to provide patient-centered care that is tailored to the specific needs of each individual. We Care Medical System delivers care in a variety of settings, including hospitals, clinics, and community health centers. The organization also utilizes telehealth and other virtual platforms to make healthcare services more accessible to people in remote or underserved areas. Overall, We Care Medical System is committed to improving the health and well-being of individuals and communities by providing comprehensive and compassionate medical care.

3.GENERAL OVERVIEW:

We Care Medical is a generic name that could refer to any number of medical organizations or systems. Without more specific information, it is difficult to provide a detailed overview.

However, in general, medical organizations and systems typically aim to provide healthcare services to patients. This may include services such as primary care, specialty care, diagnostic testing, and emergency care. These services may be provided in hospitals, clinics, or other healthcare facilities.

Medical organizations may also focus on research and education to advance medical knowledge and improve patient outcomes. They may collaborate with other healthcare providers, government agencies, and other organizations to improve healthcare access and delivery.

Again, without more specific information about the organization or system you are referring to, it is difficult to provide a more detailed overview.

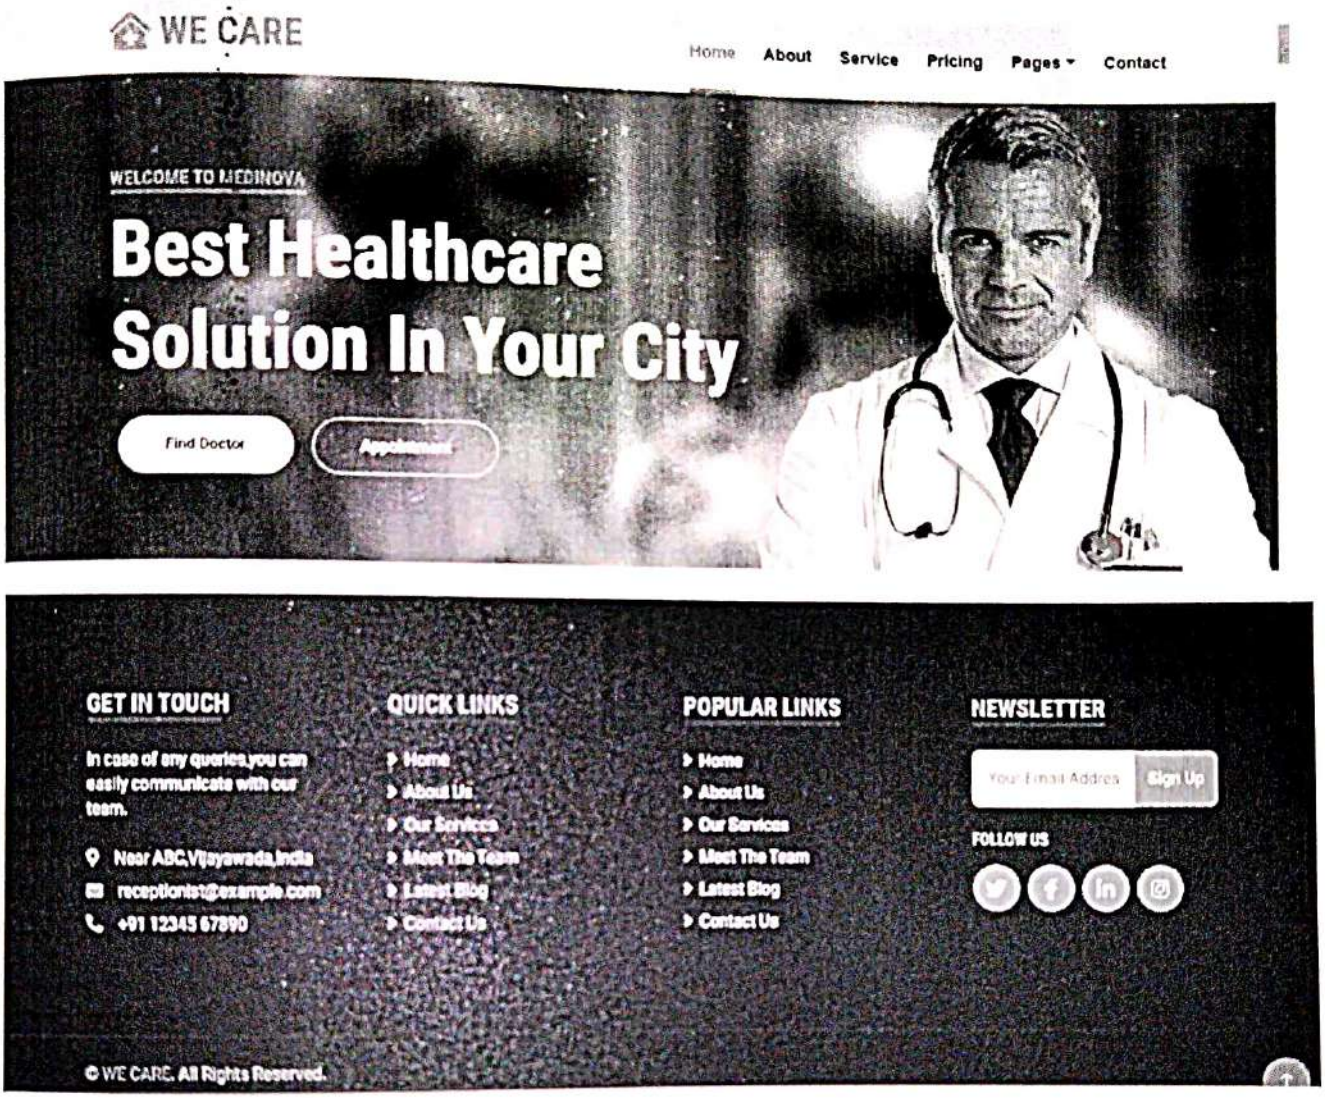
4. KEY FEATURES:

However, in general, key features of a medical organization or system may include:

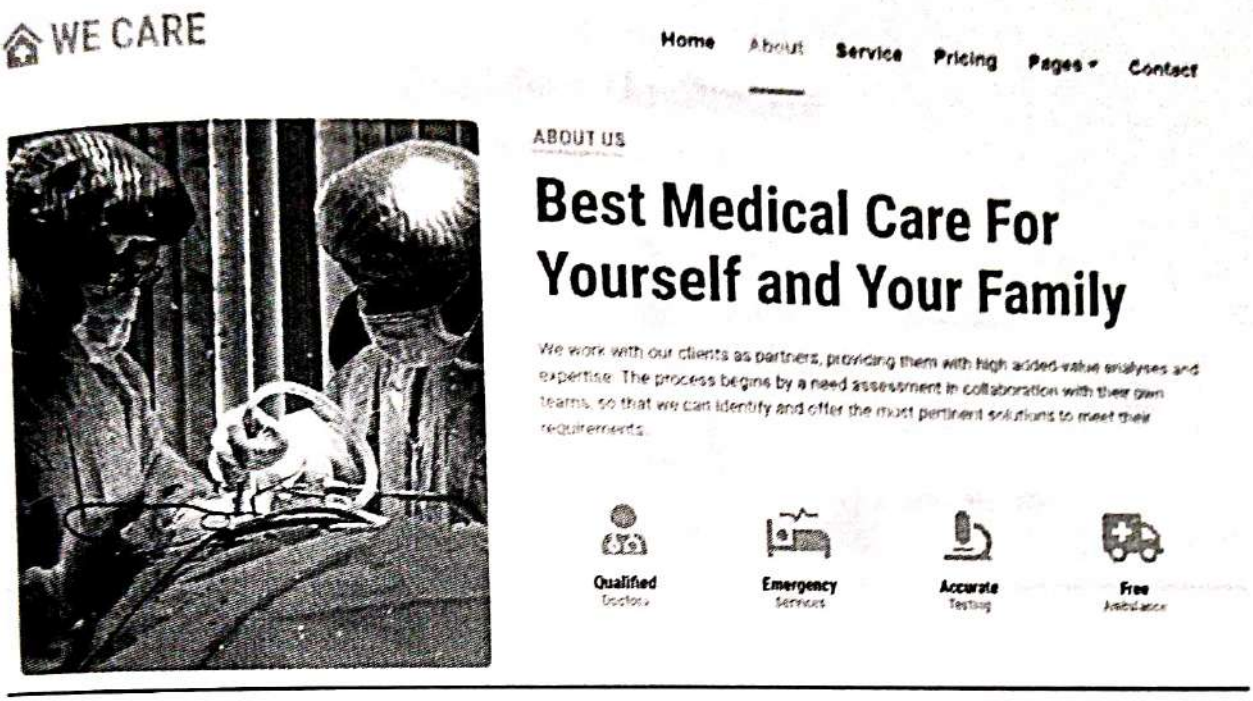
Comprehensive healthcare services: This may include primary care, specialty care, diagnostic testing, and emergency care.

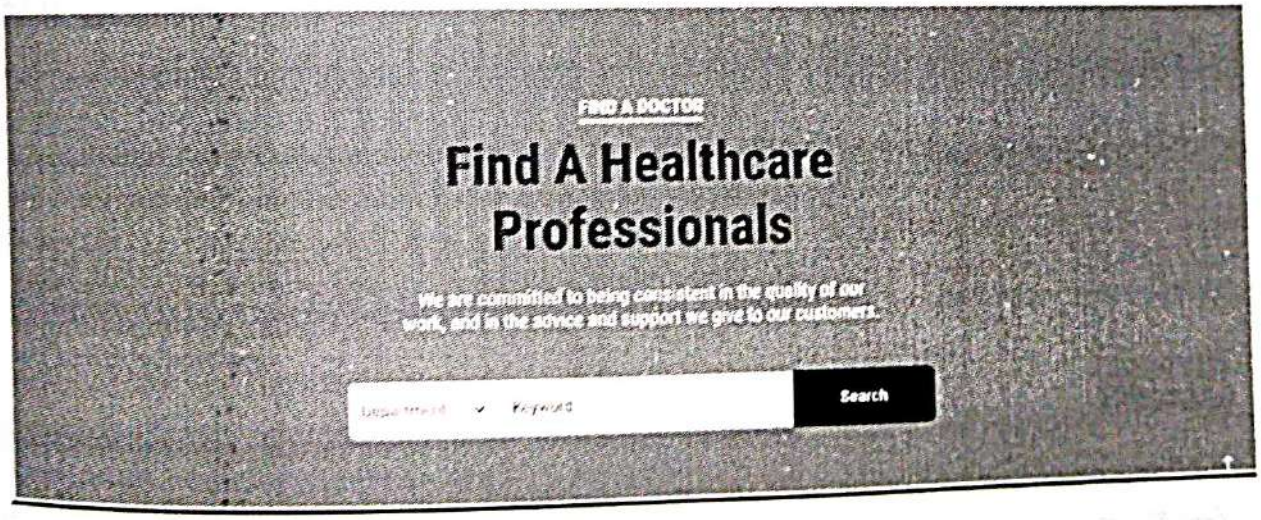
Skilled and trained healthcare providers: Medical organizations and systems usually have a team of skilled and trained healthcare providers, including physicians, nurses, and other medical professionals.

WE CARE MEDICAL SYSTEM



WE CARE MEDICAL SYSTEM





CONCLUSION:

Health care is moving into the home increasingly often and involving a mixture of people, a variety of tasks, and a broad diversity of devices and technologies; it is also occurring in a range of residential environments. The factors driving this migration include the rising costs of providing health care; the growing numbers of older adults; the increasing prevalence of chronic disease; improved survival rates of various diseases, injuries, and other conditions (including those of fragile newborns); large numbers of veterans returning from war with serious injuries; and a wide range of technological innovations. The health care that results varies considerably in its safety, effectiveness, and efficiency, as well as its quality and cost.

National Academies of Sciences, Engineering, and Medicine. 2011. Health Care Comes Home: The Human Factors. Washington, DC: The National Academies Press.

BIBOLOGRAPHY:

Much of modern medicine stems from Sir William Osier, and in the later years of his life, one of his principal interests was medical history and medical bibliography. He stimulated the late Fielding H. Garrison, of the Army Medical Library, to make out a list of the most important contributions to the literature of medicine and its ancillary sciences, to show the significance of individual writings in the history and development of the medical sciences. This list[1] first appeared in 1912, and since it was considered by Garrison "as a convenient scaffolding for a book," he later wrote his famous . . .

1. INTRODUCTION

WOW EDUCATION is an online learning platform is a webspace or portal for educational content and resources that offers a student everything they need in one place: lectures, resources, opportunities to meet and chat with other students, and more. It is also an excellent way for the student and the teacher to monitor student progress..

- Valuable education has been of a high importance in the business world
- Major benefit is time saving purpose
- Provide valuable certificate to the customers

Online education **enables the teacher and the student to set their own learning pace, and there's the added flexibility of setting a schedule that fits everyone's agenda**. As a result, using an online educational platform allows for a better balance of work and studies, so there's no need to give anything up.

Online courses **teach students how to manage their time better** since the student bears the responsibility of engaging with the course instead of simply showing up to class on an assigned day and time. As a result, students not only gain knowledge from the coursework, but they also sharpen their time management skills.

The education that takes place online or over the internet is called online learning. Another name for online learning is e-learning. It is the type of education that requires computers, laptops, or smart phones, and a high-speed internet connection. Online learning is also used in schools and colleges

Purpose of WOW EDUCATION

Help you create your customized career plan. Online education **enables you to study or teach from anywhere in the world**. This means there's no need to commute from one place to another, or follow a rigid schedule. On top of that, not only do you save time, but you also save money, which can be spent on other priorities.

Abstract:

This guide book describes about the Online learning refers to instruction that is delivered electronically through various multimedia and Internet platforms and applications. It is used interchangeably with other terms such as web-based learning, e-learning, computer-assisted instruction, and Internet-based learning.

Online learning refers to instruction that is delivered electronically through various multimedia and Internet platforms and applications. It is used interchangeably with other terms such as web-based learning, e-learning, computer-assisted instruction, and Internet-based learning.

Online learning and multimedia (OLaM) is the use of software programs to instruct students in content and skills and to facilitate learning in and out of the traditional classroom setting. OLaM is prevalent in most American school settings and is often used with little regard for the emotional effect on children and the related academic outcomes. It may be delivered via a desktop or laptop computer, mobile phone, tablet, or even via a dedicated hardware platform such as an XBox or PlayStation. The emotional state of the student can directly affect both attitude and performance in school. The emotional state of students is often marginalized as unworthy of consideration in mainstream educational settings. In addition, the design of OLaM has an effect on cognitive load and, by extension, academic growth. This chapter includes a discussion of the emotional state and attitudinal changes students undergo, when using OLaM. The work of Richard Mayer in the area of cognitive load and multimedia learning is discussed, along with the author's research with Grade 3 students in New York State. Other studies related to the impact of emotions on learning and technology use are discussed as background. The chapter thus includes theory as well as research, to present conclusions regarding the effect of OLaM, and considerations for educators when making instructional decisions for schools. The role of the student's emotional state when using OLaM, and in response to OLaM, is a key consideration.By these findings I have able to put forth the suggestions and recommendations to them an agreement. The study was carried out at pink moon technology office and Ag&Sg Siddhartha College, Vuyyuru. Primary data was collected through questionnaire survey amongst the students who attended the seminars conducted by pink moon global consultancy and the students who enrolled for guidance. 100 students responded to the questionnaire survey. Secondary data was collected through previously studied research articles and company's website.

24. CONCLUSION

The GUI offers user friendly experience and allows users with non-technical back ground as well (like student's parents also can access and see their children application process).

The application performed exceptionally well during the testing and performance is also measure standards .Compared to existing hardware solutions ,our application is flexible, affordable, faster without need of setting different infrastructure, it can be deployed any where in client systems with minimum system configurations .Notification system is also enabled to communicate students and counselors or universities much better way so that they do not miss any information and timelines. Model is built to expand any scale as per need and current application is designed by keeping growth with in next 5-7years.

In conclusion, online learning has gained popularity in the recent past, with many graduates and the working class taking some courses online to enhance their skills. Technological advancement and the flexibility associated with e-learning have contributed to high satisfaction levels among online students.
